

Carbon Reduction Plan

Supplier name: Corona Energy

Publication date: July 2026

Commitment to achieving Net Zero

Corona Energy is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024/2025
Additional Details relating to the Baseline Emissions calculations.
Corona Energy operates from two office locations within the UK, with its principal operations based at its headquarters in Croxley, Hertfordshire. In addition, the organisation operates a small fleet of electric vehicles. For the purposes of greenhouse gas reporting, Corona Energy has adopted the Operational Control approach to define its organisational boundary. Under this approach, the organisation accounts for 100% of the greenhouse gas (GHG) emissions arising from operations over which it has operational control, meaning it has the authority to introduce and implement operating policies. Emissions from operations where Corona Energy has an ownership interest but does not exercise operational control are excluded from the reporting boundary. The reported baseline emissions have been calculated in accordance with the GHG Protocol Corporate Standard and are reported in tonnes of carbon dioxide equivalent (tCO₂e) using relevant UK Government greenhouse gas conversion factors. The baseline provides the reference point against which future emissions reductions and carbon reduction initiatives will be measured.
Baseline year emissions: 2024/2025

EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	0
Scope 2	57.80
Scope 3 (Included Sources)	0
Total Emissions	57.80

Current Emissions Reporting

Reporting Year: 2026 is being finalised, due to financial year timeline considered starting April. Will be updated as soon as it is disclosed	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	
Scope 2	
Scope 3 (Included Sources)	
Total Emissions	

Emissions reduction targets

Corona Energy is committed to achieving Net Zero emissions for its UK operations by 2050.
Based on its 2025 emissions inventory, Corona Energy reported total emissions of 57.80 tCO₂e, comprising:

- Scope 1: 0 tCO₂e
- Scope 2: 57.8 tCO₂e
- Scope 3 (included sources): 57.8 tCO₂e

Corona Energy will continue to monitor and report emissions on an annual basis and will establish science-aligned reduction targets as industry-specific guidance becomes available for organisations operating within both the electricity and natural gas retail sectors.

In support of this commitment, Corona Energy will:

- Continue annual measurement and reporting of Scope 1, Scope 2 and relevant Scope 3 emissions.
- Monitor emissions intensity metrics to identify opportunities for further reductions.
- Implement cost-effective carbon reduction initiatives across business operations.
- Review emerging industry guidance, including future Science Based Targets initiative (SBTi) methodologies, and adopt formal reduction targets once applicable guidance becomes available.
- Review performance annually and update its Carbon Reduction Plan accordingly.

Completed Carbon Reduction Initiatives

The following measures have been implemented and will remain in effect during the performance of contracts:

- Ongoing greenhouse gas emissions monitoring and reporting.
- Tracking of Use of Sold Products and Fuel and Energy Related Activities (FERA) emissions.
- Procurement of verified carbon credits to compensate for operational emissions outside the Use of Sold Products and FERA categories.
- Purchase verified carbon credits supporting a hydroelectric renewable energy project.
- Achievement of EcoVadis Bronze status with a sustainability score of 68/100.

Future Carbon Reduction Initiatives

Corona Energy intends to:

Cabinet Office

- Develop and publish an updated Carbon Reduction Plan and Sustainability Report by 2027.
- Establish a formal Net Zero roadmap and quantified carbon reduction targets aligned with future industry guidance.
- Identify opportunities to further reduce electricity consumption across its operations.
- Improve emissions data collection and reporting processes.
- Continue reviewing renewable energy and sustainability initiatives to support long-term emissions reductions.
- Maintain and improve EcoVadis performance through ongoing sustainability improvements.

Corona Energy is committed to achieving Net Zero emissions by 2050 and will continue to monitor, manage and reduce operational emissions where practicable. Formal emissions reduction targets will be established as part of the updated Carbon Reduction Plan and Sustainability Report scheduled for publication by 2027.

Declaration and Sign Off

This CRP has been completed in accordance with PPN 006 and associated guidance and reporting standards for CRPs.

Emissions have been reported and recorded in accordance with the published reporting standard for CRP and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for CRPs and the Corporate Value Chain (Scope 3) Standard³.

This CRP has been reviewed and signed off by the board of directors (or equivalent management body).
